4 Open Gaps

Gap	Priority	Path to closure
F from CWRC (#21)	1	Synchronisation conditional expectation from CWRC equations
P0-H pre-registration	1	$n \geq 50$ peak bin; Subject 4 (blocked type)
P0 SNSPD	2	Lab access; $\tau_1 < \tau_2$ at $> 5\sigma$
HN-02 aging	3	64k sweeps or isolated node
HN-03 formal	3	Per-sweep cluster Ω measurement
Kerr metric	4	Broken $\text{SO}(3)$

Maturity: 7.8/8

Gate to 8: (A) F derived from CWRC closes #21 formally; (B) P0-H $n \geq 50$ + Subject 4 establishes empirical contact; (C) P0 SNSPD at $> 5\sigma$. Any one gate constitutes Level 8.
